and Personal development

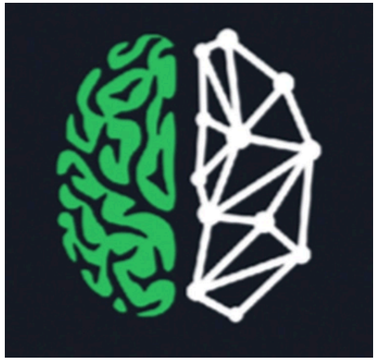
The Problem - Hypothetical User Story

Meet Maya – A Second-Year University Student

- Maya constantly juggles **classes**, **clubs**, **part-time work**, and **self-care**.
- She misses opportunities—career workshops, mental health sessions, networking events—**because she doesn't even know they exist**.
- During exam season, her **stress spikes**, but she ignores it until **burnout hits**.
- The university provides resources, but they're **scattered**, **reactive**, and **impersonal**.

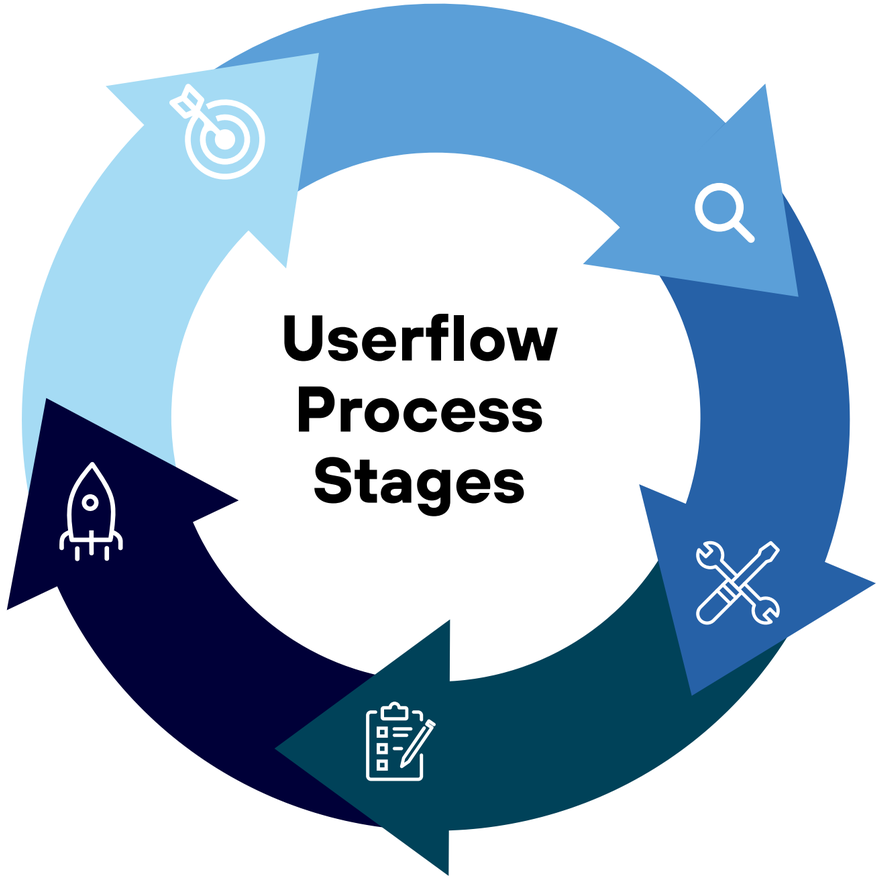
That's exactly the problem at hand:

Students don't lack opportunities or resources—they **lack a personalized, intelligent system** that connects all aspects of university life into **one adaptive ecosystem**.



Our Solution Workflow

HOW UNI-THRIVE TRACKS & ENHANCES YOUR WELLNESS:



Log in 01

Keep your profile hidden through our anonymous option and do simple check-ins to understand your mental state.

Activity Rings 02

A simple way to track mental, physical and psychological wellness for young university students

AI layer 03

AI assistants offer calm, supportive guidance for your mental wellbeing and have an Alarm system which notifies the counsellors if it senses any danger with the users conversation

Personalized Insights 04

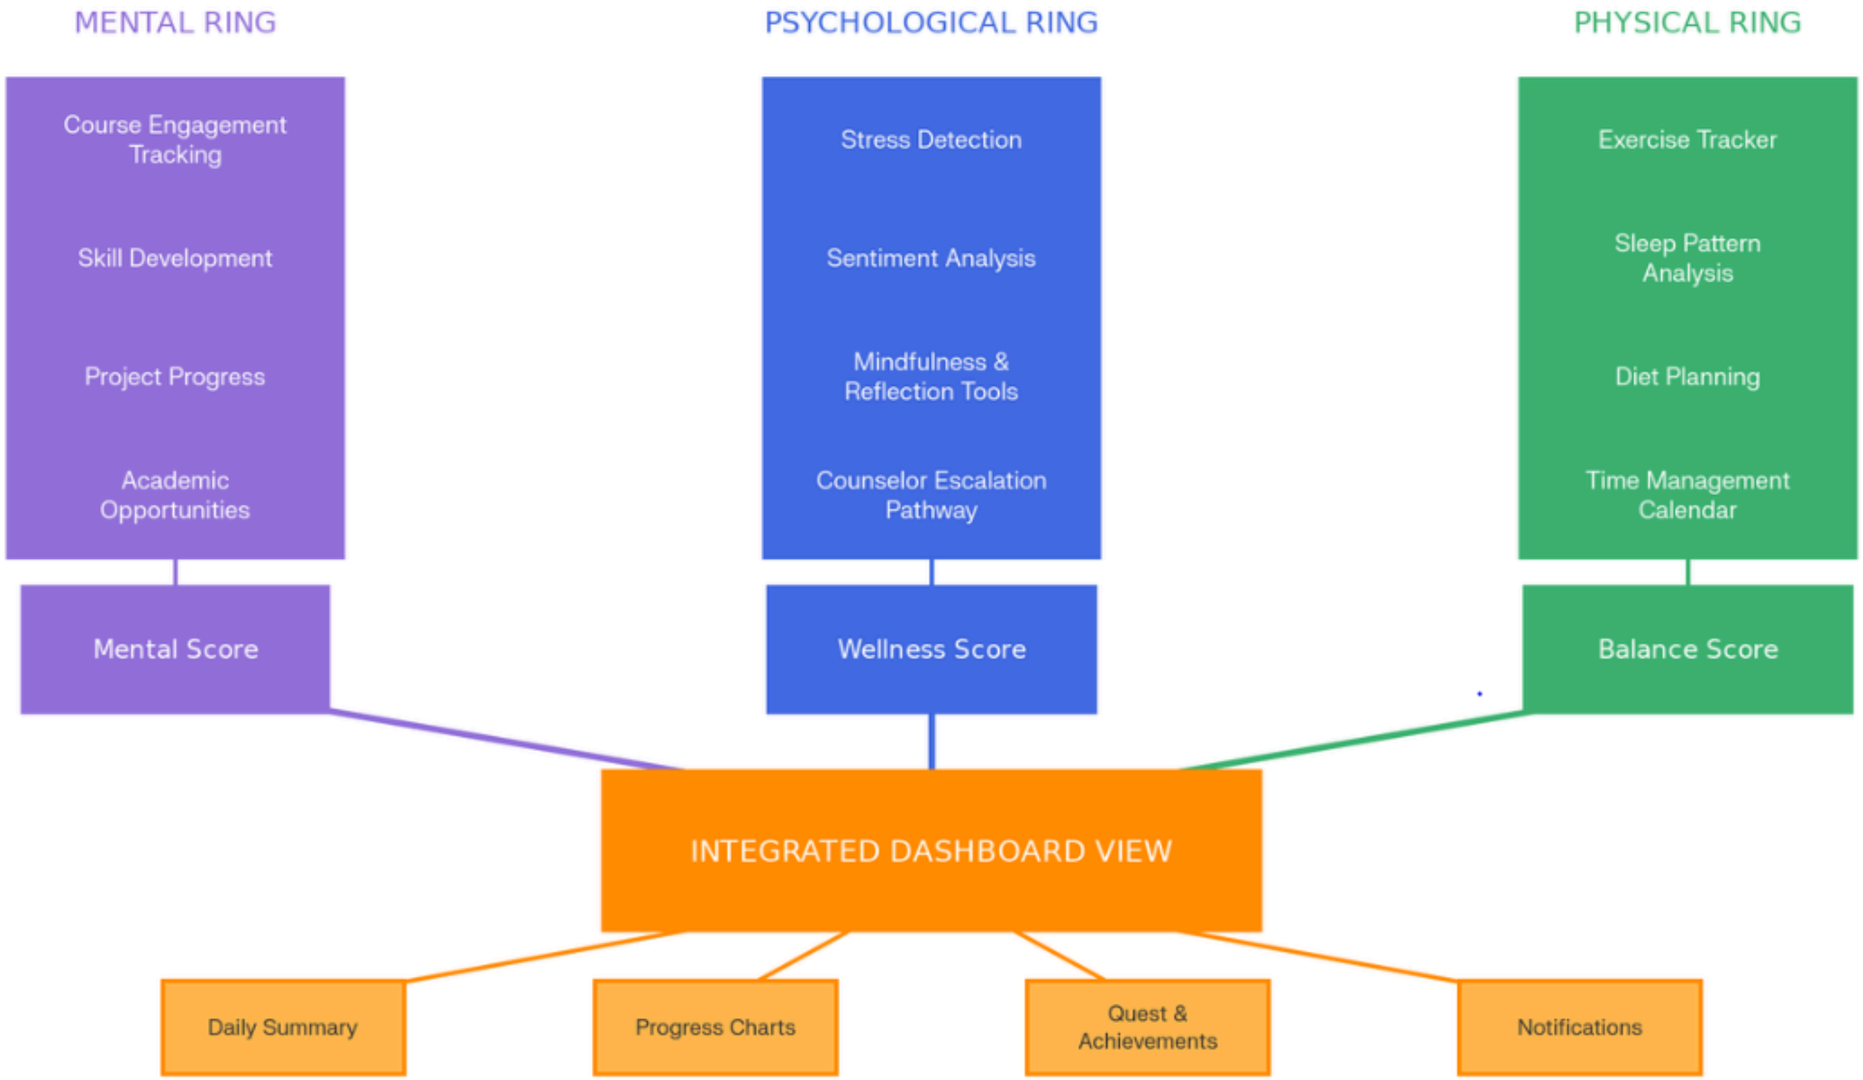
Using the analyzed data, we generate tailored recommendations and insights. The system learns your preferences and challenges to provide guidance that is specifically relevant to your personal growth journey and objectives

Human Layer 05

When sustained high stress or lack of improvement is detected, the platform provides clear pathways for users to existing counselling resources.

Activity Rings

Three Rings Dashboard - Feature Breakdown



Weekly Summaries

A snapshot of your balance and growth across all dimensions.

This Week's Highlights

Mental: You completed 3 course modules and spent [X] hours on skill development.

Psychological: You logged [Y] mindfulness sessions and maintained strong social connections.

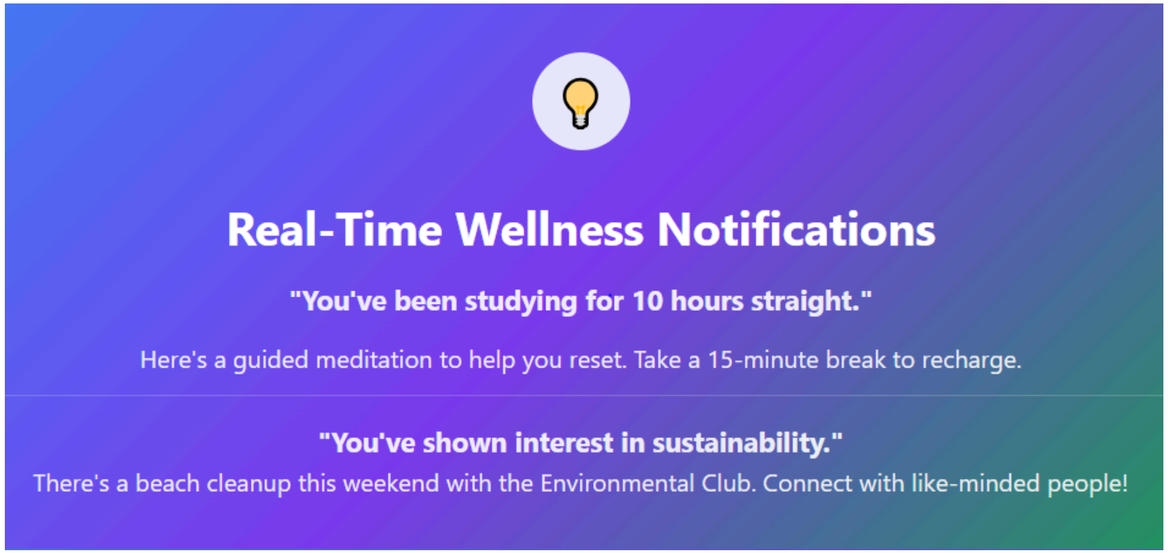
Physical: You managed your time effectively across [Z] activities and hit your sleep goal 5/7 nights.

Spotlight: Your Top Opportunity:

Based on your activity, we found a [Writing Workshop/Gym Class] that perfectly matches your goals for next week.

Weekly Achievement Unlocked:

"Balance Seeker" – You successfully distributed your time across all three wellness rings this week!



Frontend - Workflow

Conversational Entry

- Users answer a questionnaire
- Express their state of mind through it

Intelligent Analysis (MCP+NLP)

- Interprets emotional state, user goals and context (academic/career /social)

Smart Matching

Dynamically connects students to:

- Academic & mental health resources
- Career & skill opportunities
- Social & community events

Actionable Recommendation

- Immediate coping steps
- Curated opportunities
- Personalized suggestions

Dynamic Dashboard

- personalized interface
- Progress tracking & streaks
- Weekly reflection summaries

Backend- Workflow

1. Backend Architecture

API Gateway

- Handles request centrally
- Secure routing to backend services

Authentication

- OAuth 2.0 / SSO / JWT
- Access control
- Session management

Data Aggregation

- Integrates university APIs
- Event feeds & RSS sources
- External opportunity scraping
- Normalizes data into unified structure

Core Data Infrastructure

- PostgreSQL / MongoDB for structured data
- Vector Database (Pinecone / FAISS) for embeddings
- Stores User profiles, health metrics, activities & events, recommendations

Backend- Workflow

2. AI Layer

- Mental & physical health metrics tracking
- Longitudinal psychological trend detection
- Pattern-based intervention triggers

- Monitoring (Grafana / Prometheus)
- Usage analytics
- Failure detection (auth, notification, model errors)
- Admin dashboard for universities

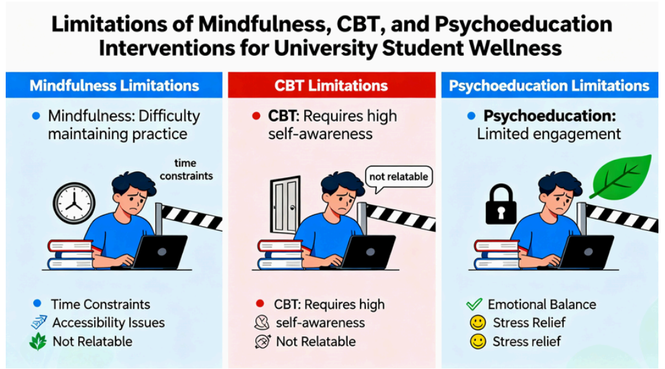
AI & ML Processing → Analytics & Insights → Smart Feedback System → Observation

- Stress detection (NLP models)
- Preference learning engine
- Context-aware recommendation system
- Vector similarity search

- Push notifications
- Weekly AI-generated summaries
- Escalation alerts when risk thresholds are detected

Competitive and Market Analysis

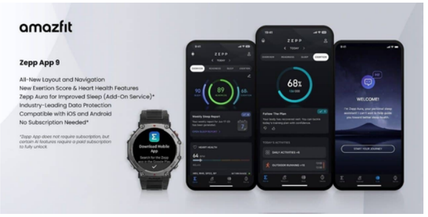
Limitations of Existing Solutions

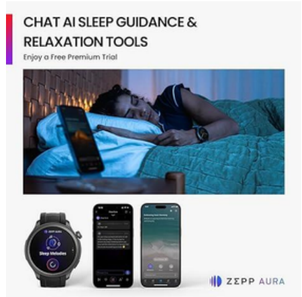


🔗 Mental Health Correlations

- Academic stress → Depression (r = 0.27), Anxiety (r = 0.21), Stress (r = 0.23)
- Body image dissatisfaction → Anxiety & low self-esteem
- Social media use → Increased depression & anxiety symptoms
- Academic workload competing with exercise time
-
- Sedentary class delivery (lectures, studying)

Digital interventions

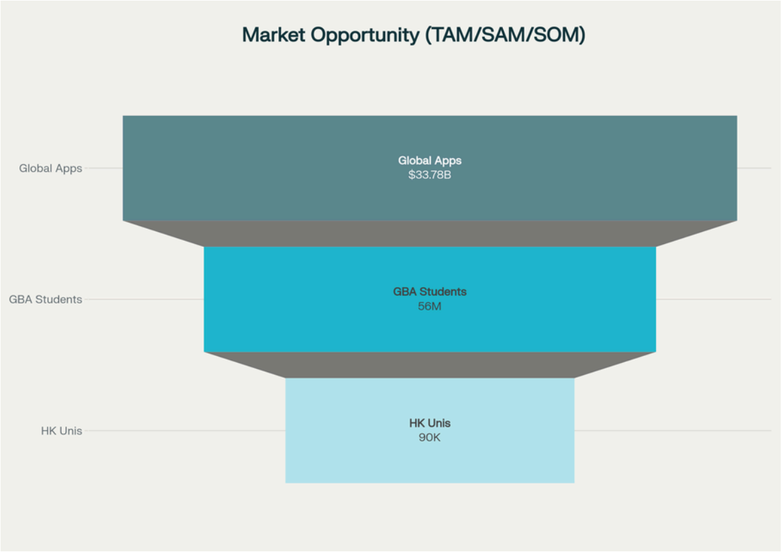


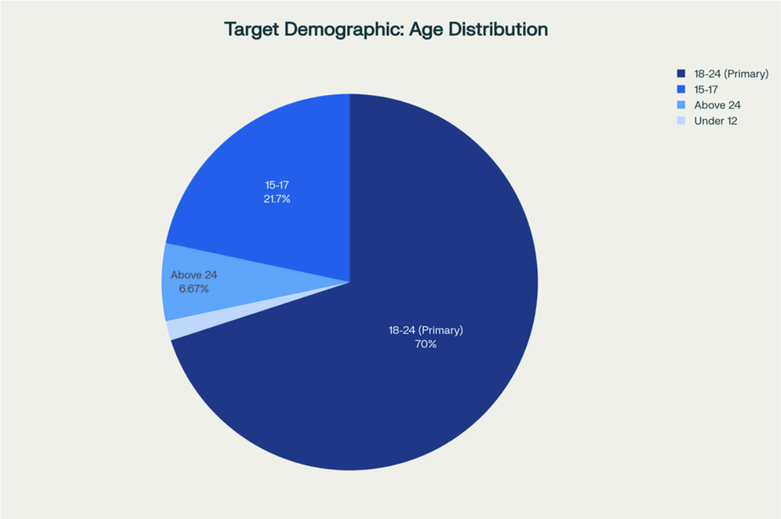


Digital interventions show significant effectiveness (g=0.80-0.88) when combined with human support
Technology alone is insufficient; integrated ecosystems needed

Competitive Advantage Matrix

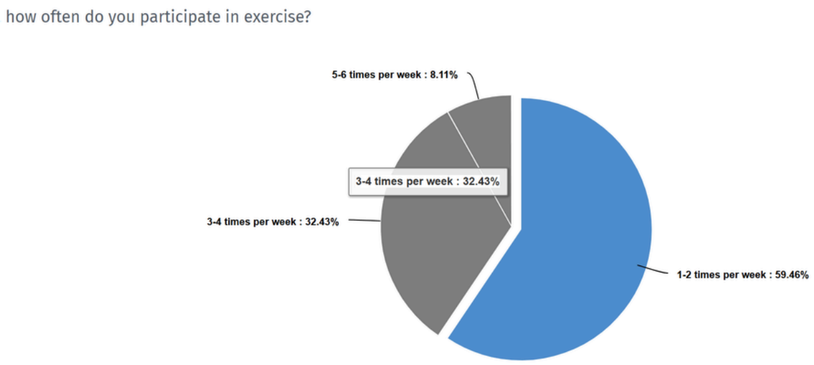
Competitor	Mental Hlth	Physical Hlth	Academic Int	Social Int	AI Personal	Proactive Alrt
Headspace/Calm	✓	✗	✗	✗	✗	✗
University Portals	✗	✗	✓	✗	✗	✗
Fitness Apps	✗	✓	✗	✗	✗	✗
Our Solution	✓	✓	✓	✓	✓	✓



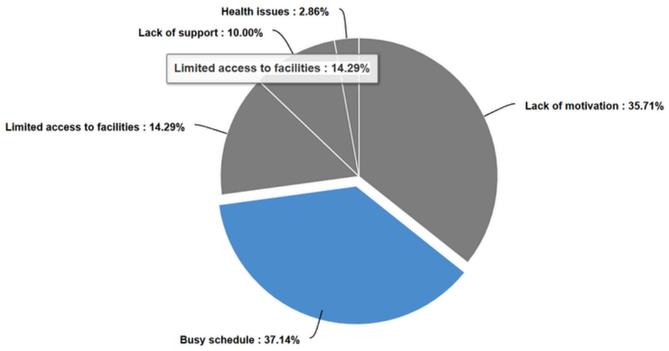


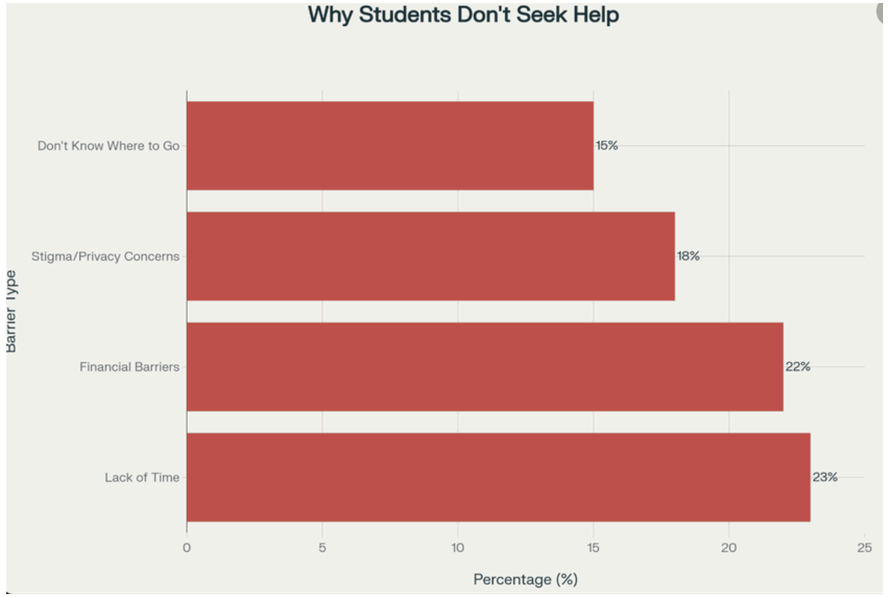
Statistical analysis

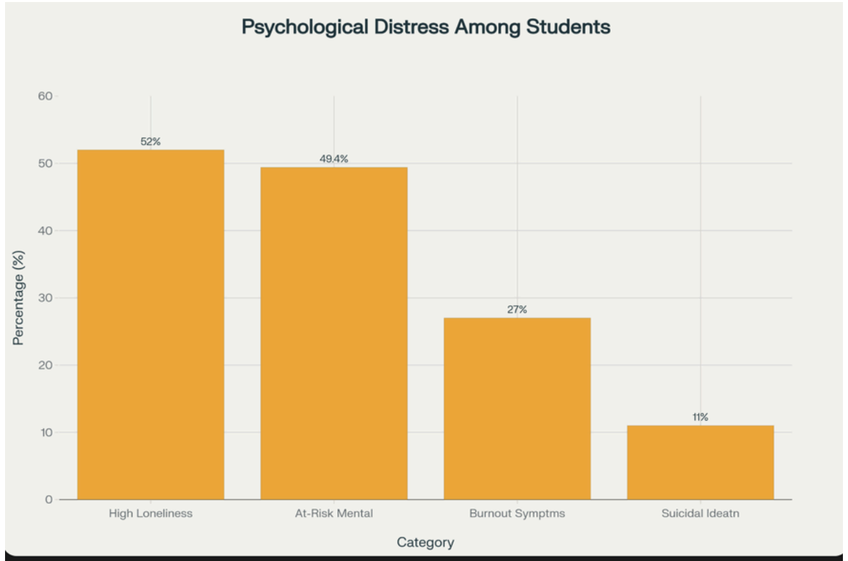
Factors behind inadequate exercise



Survey on University student BMI distrubution



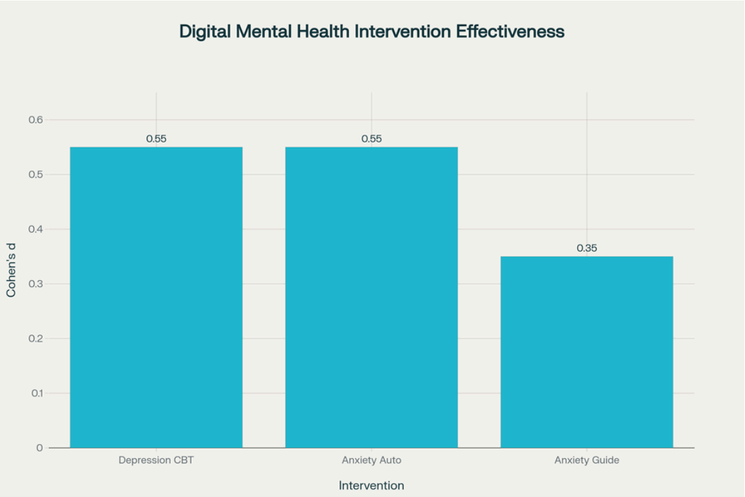




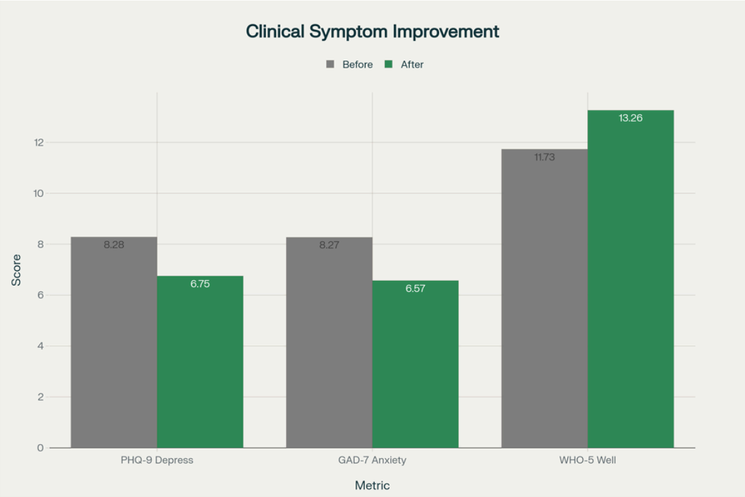
Psychological distress indicators showing loneliness, at-risk status, burnout, and suicidal ideation prevalence

Health Opportunities

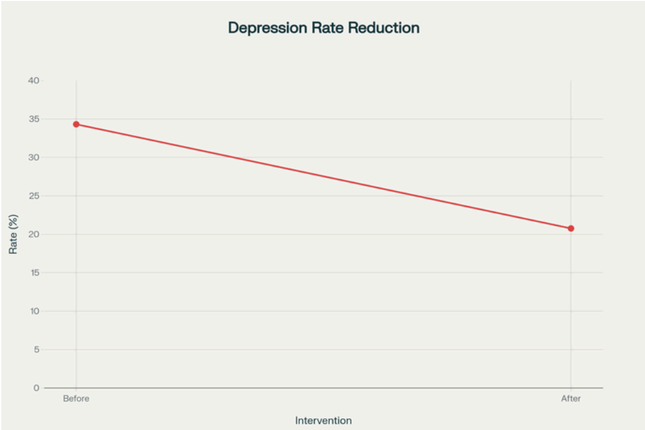
Effective Analysis of Solution Framework

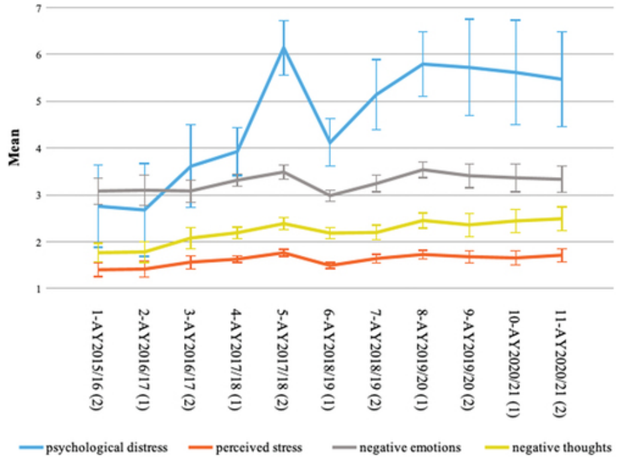


Effect sizes of digital mental health interventions showing automated interventions outperform guided interventions for anxiety



Clinical validation showing significant improvements in depression, anxiety, and wellbeing scores after digital intervention





Business Model

01 Subscription Model:

Customer segment - B2C
Target audience - Students
Why? - Predictable base revenue, proves product love
What - Core product access and all features

02 Partnerships:

Customer segment - B2B
Target - All UGC Funded Universities
Why? - Large contract values, scale, and validation
What - Core product access, data & insights, custom solutions and all features

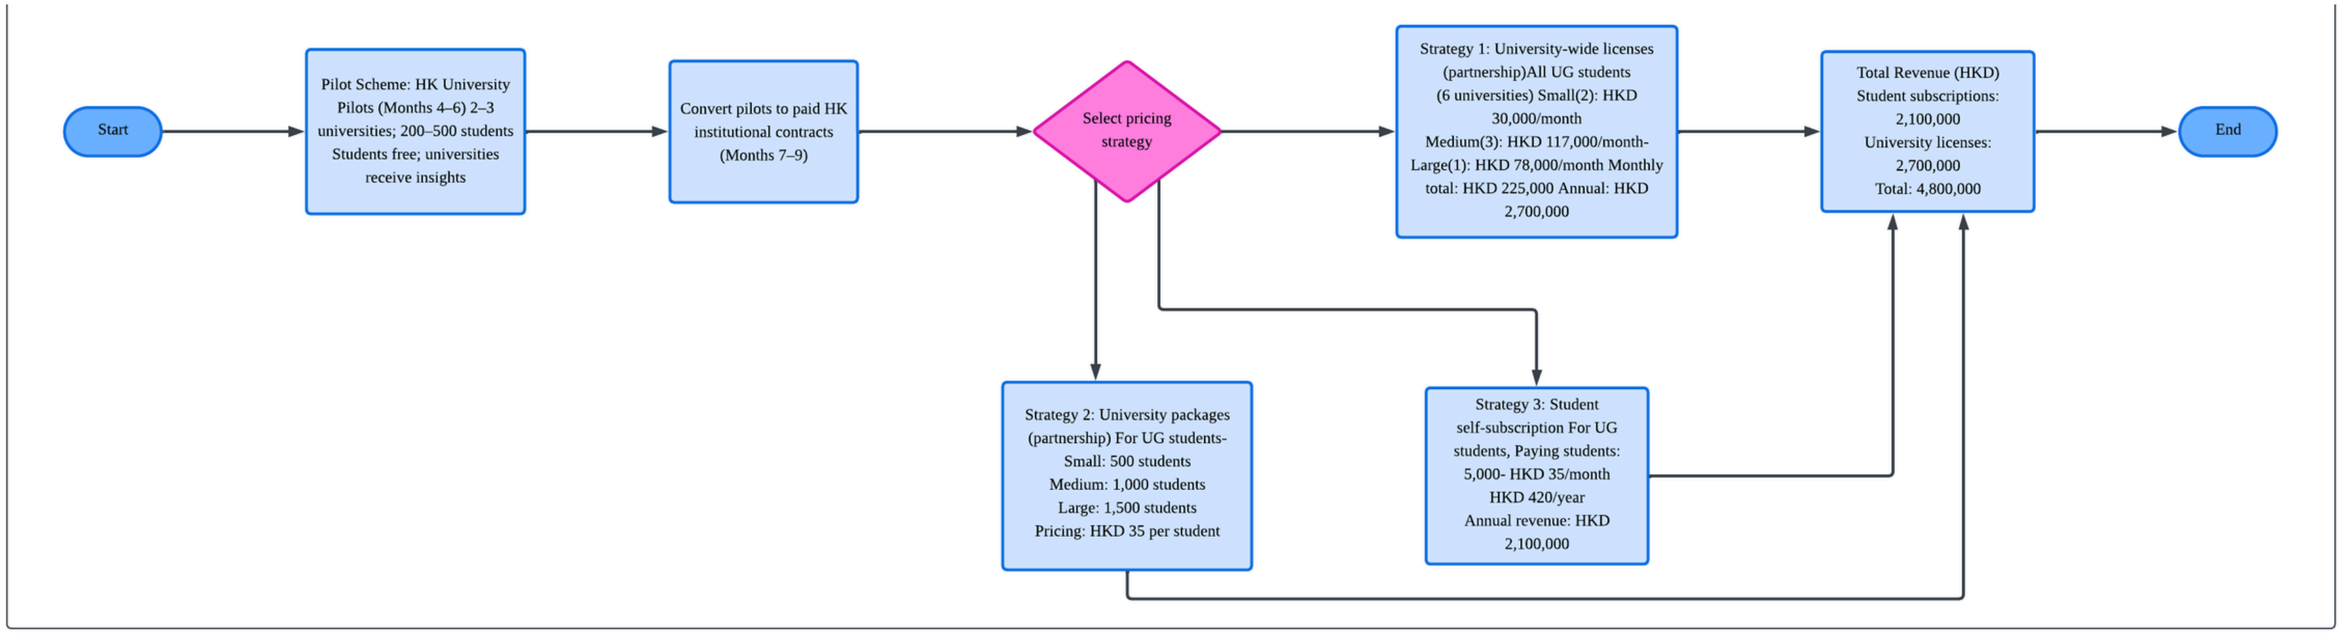
03 Sales Motion:

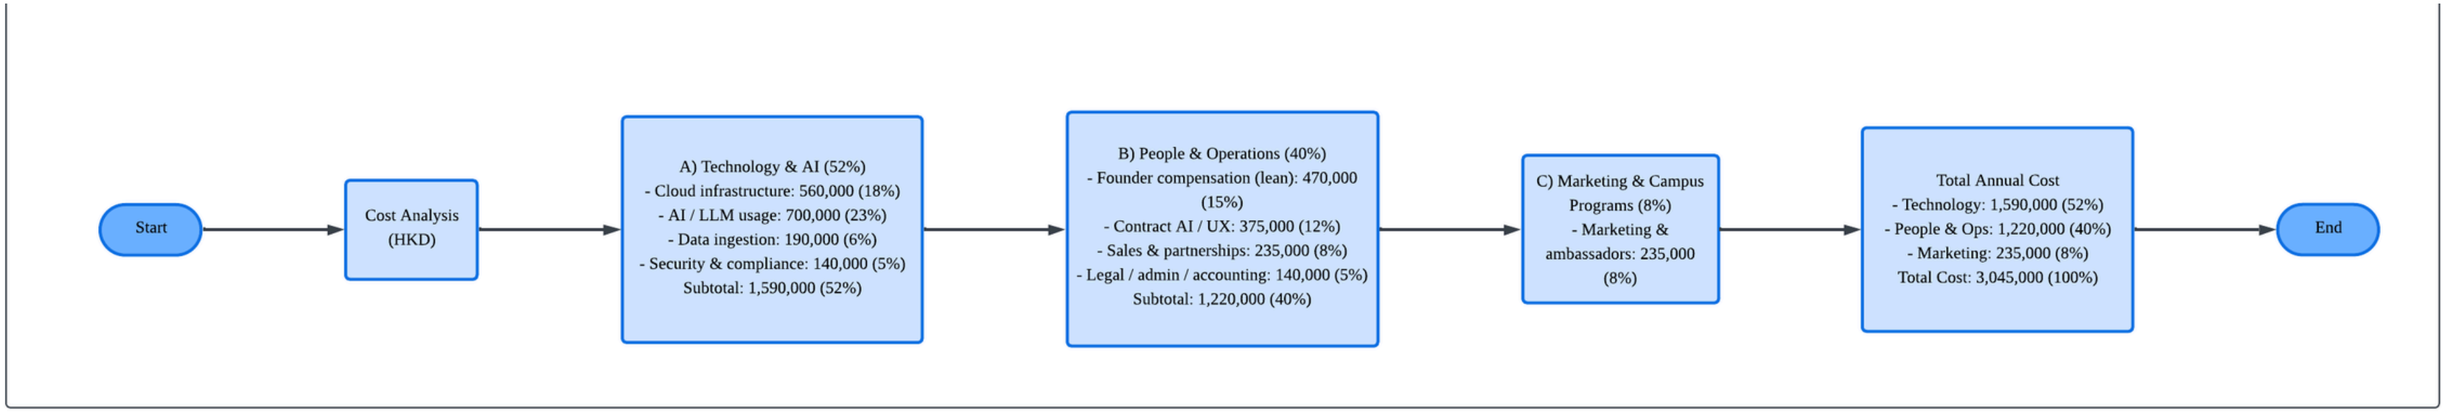
Bottom-Up → **Student Ambassadors**

Top-Down → **Student Affairs + Academic Registry**

Business Model

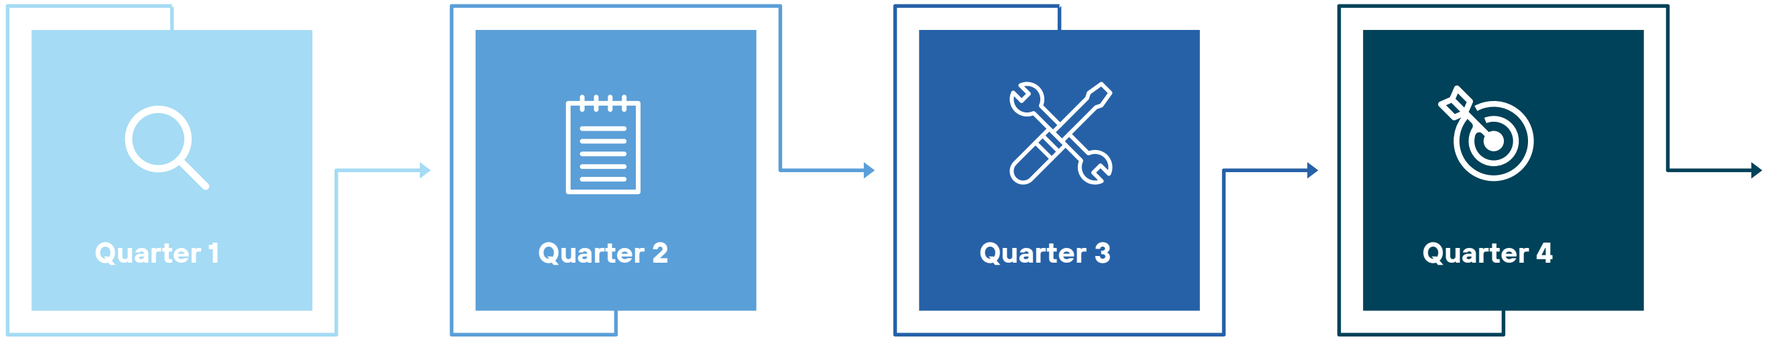
Pricing Strategy & Cost Analysis





12 Month - Project Timeline

Four Quarter phases that mark our project progress milestones



HK Problem Validation & University Alignment

- Validate idea to the target audience.
- Validate HK university procurement appetite
- Lock compliance & data boundaries
- HK-Focused Validation and PRD
- PDPO-aligned data policy
- University-safe product language

MVP Build and HK University Pilots

- Deliver a working, credible product for Pilot
- Validate engagement at HKD 35 perceived value
- Product improvement - Student onboarding
- Get Data Sources from HK universities
- University Deliverables - Engagement uplift

Monetization Launch (HKD-First)

- Turn pilots into a paying platform
- Launch B2C subscription
- Launch B2B subscription with university
- Usage-based throttling

HK Expansion & Funding Readiness

- Prepare for regional expansion across universities in Hong Kong
- AI cost controls
- Prompt caching
